DETAILED ACTION

Reasons for Allowance

1. The following is an examiner's statement of reasons for allowance: In response to the final office action dated July 18, 2008, further in view of applicant's Appeal Brief filed on 10/22/08, the application has been carefully reviewed and respectfully considered.

According to applicant's remarks discussed in pages 10-39, the arguments have been found persuasive, and the rejection has been withdrawn. Therefore, claims 1-18, has been allowed for the reasons given below:

With respect to claims 1-6, the prior art searched and of record neither anticipates nor suggests the claimed invention as amended. In particular, a method of scanning multi-sided documents, comprising: using a TWAIN source to control scanning of multiple sides of a multi-sided document by a scanning device; producing, by the TWAIN source, a composite image by tiling the images of individual sides of the multi-sided document vertically, horizontally, or a combination of vertical and horizontal placements; and transferring, using a TWAIN protocol, the composite image from the TWAIN source to an application running on a computing device.

Further, with respect to claims 7-12, the prior art searched and of record neither anticipates nor suggests a method of scanning multi-sided documents, using a TWAIN

Art Unit: 2625

source to control scanning of multiple sides of a multi-sided document by a scanning device; transferring a single composite image for the multi-sided document from the TWAIN source to a TWAIN application, the single composite image being produced by the TWAIN source and being composed of vertically tiled images, each of the vertically tiled images being an image of one side of the multi-sided document, wherein the single composite image is transferred by sequentially scanning and transferring consecutive image rows of each side of the multi-sided document using a TWAIN buffered memory transfer method.

Finally, with respect to claims 13-15, the prior art searched and of record neither anticipates nor suggests a method of scanning documents, displaying a TWAIN source user interface which allows a user to select scanning of a multi-sided document; and, controlling, by use of a TWAIN source, scanning performed by a scanning device, including, when scanning of a multi-sided document is selected by the user, creating, by the TWAIN source, a single composite image that includes images of all sides of the multi-sided document and forwarding the single composite image from the TWAIN source to an application running on a computing system.

Therefore, claims 1-18, are Allowed for the reasons the claimed invention are distinct from the prior art searched and of record neither anticipates nor suggests the claimed invention alone in combination.
